I came to data through accounting — a business and accounting degree, ACCA coursework, and an internship keeping a department's books. I now build Python automation and run statistical analysis end to end, finishing an MBA in Big Data & AI at Sejong University.

PROJECTS

Tejamkor — automated price comparison bot Python · Playwright · Telegram Bot API live channel

- Automatically finds the cheapest price for any product across three major Uzbek retailers and publishes it to a live Telegram channel — replacing hours of manual price-checking.
- Matches products reliably across four languages, so shoppers see a true like-for-like comparison rather than mismatched items.
- Covers 368 products, including 69 appliances tracked across multiple stores at once.

MMAT — retrieval-augmented support chatbot LangChain · OpenAI · FAISS team project

- Built a Telegram chatbot that answers customer product, warranty and delivery questions instantly, freeing staff from repetitive queries.
- Answers common questions at near-zero cost and declines anything outside its scope rather than guessing — safe to put in front of customers.

Order and FAQ bot for small retailers Python · Telegram Bot API Uzbek

- Delivered a working order-taking bot for a non-technical shop owner, paired with sales reporting they can actually read.

DATA MINING & ANALYSIS

Customer churn prediction Orange · Telco Customer Churn dataset

- Built a model that predicts which customers are about to leave, accurate enough to act on (AUC 0.845), and identified contract type as the main driver — pointing the business toward retention through contract structure rather than discounting.

Delivery performance and customer satisfaction SPSS, Orange · Brazilian E-Commerce dataset

- Analysed 100,000+ e-commerce orders to find what drives customer satisfaction, showing delivery speed is the biggest controllable factor and giving operations a clear priority to fix.

Consumer segmentation for direct mail K-Means, Random Forest · 600 households

- Segmented 600 customers into distinct groups and pinpointed the single most valuable one to target, so marketing spend goes where it pays off.

EXPERIENCE

Overseas Sales Intern Allrack, South Korea Feb 2026 – Aug 2026

- Export sales support for industrial racking and steel structures. Produced Russian- and Uzbek-language recruitment postings for warehouse roles, with applications routed through Telegram.

Assistant Accountant, Internship Buchang, Gwangju Nov 2023 – May 2024

- Recorded daily transactions for the Civil Engineering Department and closed the monthly report ahead of schedule.

Education Consultant Vodiy Ta'lim, Namangan (remote) Apr 2022 – Sep 2023

- Advised students applying to Korean universities, from target institution through to submission. Around 80% of applications approved.

EDUCATION

MBA, Big Data & AI Sejong University Graduate School of Business, Seoul Feb 2025 – present

BBA, Business Administration and Accounting Chonnam National University, Gwangju Sep 2018 – Feb 2023

ACCA Exempt from four papers: BT, MA, FA, LW Sep 2022 – Jan 2023

SKILLS

- Building — Python (requests, BeautifulSoup, Playwright, pandas), Telegram Bot API, LangChain, OpenAI API, FAISS, Git
- Analysis — Power BI, Tableau, SPSS, Orange; logistic regression, decision trees, neural networks, K-Means, Random Forest
- Accounting — transaction recording, cost tracking, monthly close; I-CUBE ERP and SAP; Excel to macro level
- Languages — Uzbek (native), English and Korean (proficient), Russian (elementary)
